

ERASMUS+ COURSES 2017- 2018

The academic year is divided into two terms, winter and spring semester.

A successful examination in a course gives the student the opportunity to transfer it to their home university, and it provides them with ECTS Credit Points, depending on the hours taught per week. Essays also provide with 3 ECTS Credit Points (see detailed information below, pages 36-37). The courses with the code EPA are taught for 3hrs/week and provide to the students 4ects.

Below are the Erasmus+ courses taught in the Law School in the academic year 2017-2018.

COURSE DESCRIPTION

Recently in Europe, the healthcare law and other fields of special administrative law, like the environmental law, have experienced great development due to the influence of the advances of science and technology and also due to the global health and environmental problems, which require coordinated action of states. The legislation, the case law and the scientific literature are enriched daily. Emphasis is given in bioethics, in the protection of public health and in the organization and operation of "public services of health" of high quality for the population, according either the "Bismarkian" model (f.ex. in France) either the "Beveridgian" model (f.ex. in United Kingdom) either mixed models (f.ex. in Greece).

The course approaches systematically the public healthcare law, defines this branch of law scientifically, as autonomous field of the social protection law, and examines the organization and the operation of public services of health as well as the users rights based on the one hand on the general principles of public service, such as the principle of equality and continuity, and on the other hand on the fundamental human rights and constitutional principles of autonomy and dignity of human being. The course focuses on international and especially European Union's law. Extensive comparative reports in the systems of health of United Kingdom, France and Greece are included. The comparison of these different systems takes account of the differently orientated main legislative interventions adopted, in order to achieve the common goals for healthcare protection in the European Union (open method of coordination). United Kingdom insists on greater competition rules in the National Health Service and France on the collaboration of the private and public sector of the healthcare system and the accreditation of their functioning.

[1] The term “public service of health” refers to the healthcare systems where any person has access as social benefit. The system is intrinsically linked to the social coverage of risk.

[2] The notion of public service in European Union's law corresponds roughly to the notion of “service of general interest”.

[3] Collaboration is wider than the private public partnerships.

26. Philosophy of Law (2hrs/week): V. Voutsakis / Ph. Vasilogiannis

Philosophical theories of rights

What is a right? Is it necessary to dissociate liberties from claims? Are rights forms of interests? If so, how is a right to be distinguished from a mere interest? Or, alternatively, are rights forms of freedom – and if so, how can they be distinguished from other forms of freedom?

Moreover, how are rights to be justified? Do we need rights? If so, on what grounds, grounds of general utility or grounds of autonomy? Are rights absolute? What is the function of a right?

Finally, what are the normative conditions of the exercise of a right? Are all rights, in a certain sense, positive? How is the state supposed to protect a right?

Such questions, questions regarding, *first*, the nature, *second*, the foundations and, *third*, the exercise of rights, are of great practical and theoretical interest. This is the reason why they should be treated from a philosophical point of view, i.e. the point of view of philosophy of law – and not only from a civil law or a constitutional law perspective.
